

LEARN@WU Developments

Gustaf Neumann, Peter Alberer

{gustaf.neumann,peter.alberer}@wu-wien.ac.at

Department of Information Systems

Vienna University of Economics and Business Administration

Overview

■ Part 1:

- ☐ Learn@WU -> Sustainability
- ☐ Developments, Experiences
- ☐ System and Performance

■ Part 2:

- ☐ Differences between plain .LRN and Learn@WU
- ☐ Developed Modules
- ☐ Current in the Work

Learn@WU

■ Designed for E-Learning in the large

- ☐ Full coverage of e-learning materials for the first study year for all academic programs of the Vienna University of Economics and Business Administration
- ☐ 3,000-4,000 beginners per year
- ☐ Students have the choice between distance learning and presence learning in the class rooms

■ One of the most intensely used e-learning platforms on universities world-wide

- ☐ Up to 4.3 Mio hits,
- ☐ Up to 1.2 Mio page views per day,
- ☐ Up to 600 concurrent connections

Current State

(Heidelberg figures + 10-40%)

- About 26.000 mostly interactive learning resources
 - Most content developed by domain experts via MS Word
 - Organized via a hierarchical “concept space”
- Broad Acceptance
 - 2 Usability Studies (students, teachers) triggered more than 100 changes
 - About 19.000 registered students
 - Students solve up to 360.000 interactive exercises per day
 - Average response time less 0.25 sec
 - More than 70.000 exams through mark-reader
 - 870 classes are using currently learn@wu, >400 community administrators
 - *“Without Learn@WU, the operations of our university would not have been possible”* (Christoph Badelt, President of WU)
- Growth Path
 - Inhouse teaching, providing more support for classes in higher semesters
 - Signed contract with Ministry for providing access to our e-learning materials for high-schools
 - Tailored version of learn@wu for high-schools in use with very positive feedback (“Bildungsserver Burgenland”)

Organizational Changes

■ Part of the university infrastructure

- Governed by a *Steering Committee* (Vice President of infrastructure, Vice President of Academic Affairs, CIO, Chair of Department of IS (project lead), Chair of Department of Pedagogics)
- Important Role in the forthcoming change from diploma studies to bachelor and master programs

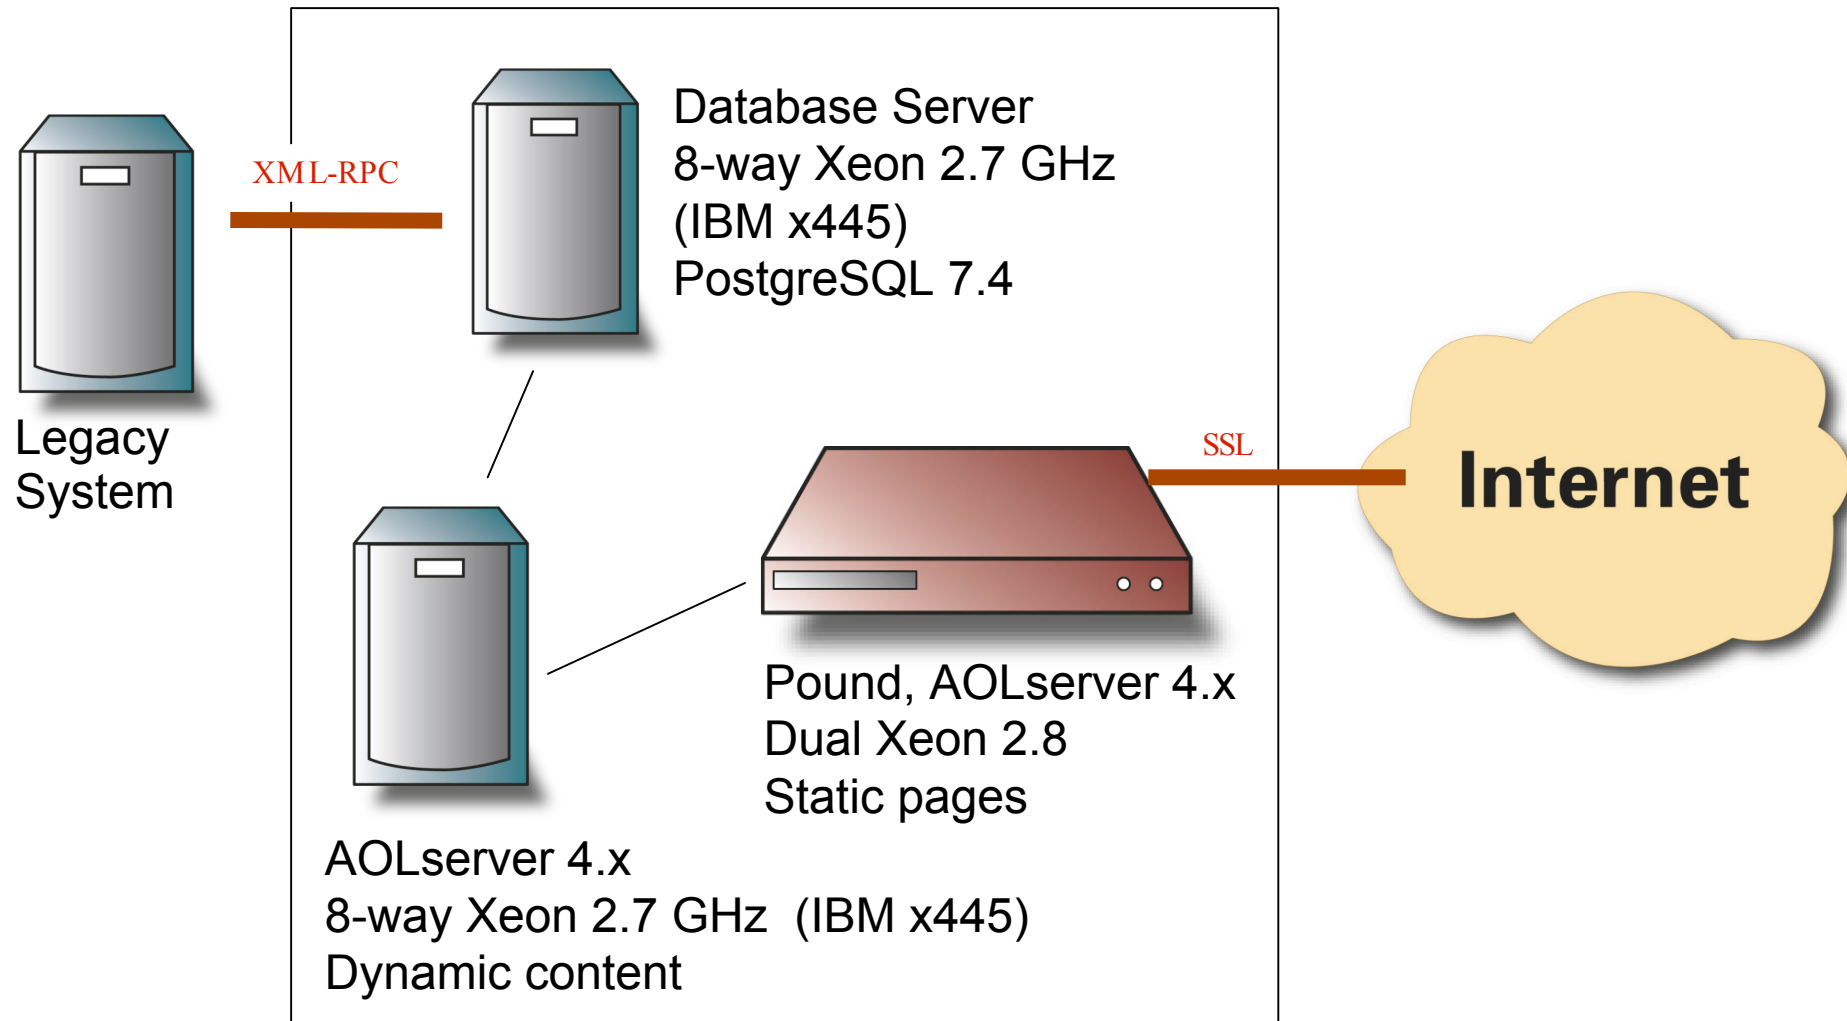

■ Team

- 28 People employed by project (15 FTE)
- 4 persons technical support (incl. help desk)
- 1 person didactic support

■ Development:

- Deployment of first version in October 2002 based on OACS
- Relaunch of platform based on DotLRN in April 2004
- More powerful Server-System in Sept 2004

Hardware Configuration

Experiences with the System

■ Continuous Performance Tweaking

- Tradeoff between speed and functionality (more later)
- Page view performance most time <0.15 secs (<500 users, <10 views/sec)
- Above this performance decreases in a non-linear fashion (hurts esp. portal pages and forums)
- Max sustained rate 35 views/sec, up to 1000 users

■ Hardware

- 8-processor for dynamic web pages machine scales well
- Database server does not scale well (max load: 4)
 - Most data cached (very little disk i/o)
 - At least half of the CPUs are idle while SQL-queries slow down
- Most likely: memory bandwidth bottleneck

■ Software

- System slows down after long run (about 10% per day, daily reboot helps)
- Newer versions of AOLserver seem less stable

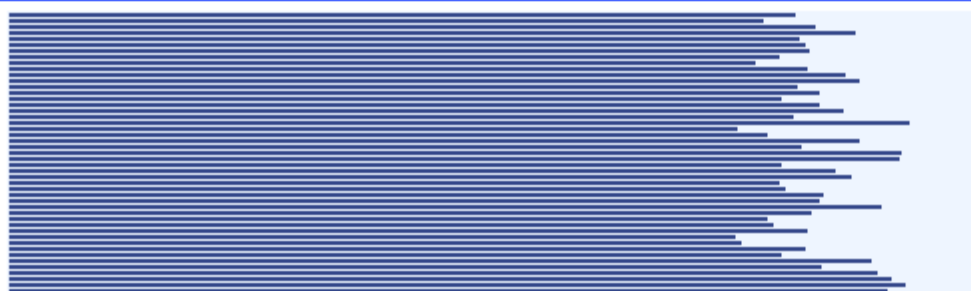

Learn@WU - Performance statistics

[TLF Administration](#) : Learn@WU - Performance statistics

Active Users: 903 active users in last 10 minutes, 5133 in last 24 hours (9149 total)
Current System Activity: 4891 exercises last 15 mins, 30.1 views/sec, 2.01 views/min/user, avg. view time: 29.9
Current System Load: 18:02:11 up 11 days, 22:20, 1 user, load average: 5.91, 5.34, 4.75
Current Avg Response Time/sec: 0.26 (last minute), 0.35 (last 30 minutes), 0.36 (last hour), 0.28 (last 23 hours)

System Infrastructure

- Most of the newly developed components of Learn@WU are implemented in XOTcl
- XOTcl achieved increased acceptance in Tcl community
 - Part of the Active State Core distribution
 - Part of Tcl Aqua for Mac OS X (part of Tiger)
- Benefits
 - Highly flexible, fastest Tcl-OO, thread-safe
 - Various language constructs e.g.:
 - C-based positional arguments, can reduce invocation overhead of `ad_procs` by a factor of 6
 - Object/Class Serializer (well suited for caching)
 - Two .apm packages are available (core, request-monitor)
 - Integrated with OACS api browser

Learn@WU vs. plain dotLRN

- Modifications of dotLRN
- Modifications of OpenACS
- Additional Components
 - ☐ Sitewide Search
 - ☐ OpenLTS
 - ☐ Homework/Gradebook
 - ☐ Problem based learning
- Integration with University Legacy-Systems

Learn@WU – Components

Modifications of dotLRN

- Departments + Classes implemented as communities
 - Now, these can have members, portal ...
 - XOTcl-Community Objects for all access to community-data (cached)
- Class Instances inherit Class data
 - Class Instance portlets display content from parent classes
 - Classes are repositories for information common to all Class instances (e.g. general forum, learning materials, announcements, parts of Syllabus)
 - Members of a class instance also get content from class-packages into their personal portal
- Class Catalog
 - Hierarchical structure of studies, folders and classes

Modifications of dotLRN (cont.)

■ Several other changes

- /dotlrn/www/admin/*/ became a separate package for dotlrn-wide admin stuff
- Allow multiple site nodes for one package
 - Configuration of a package can be reused
- Changed the relationships between communities
 - Multiple departments responsible for one class / class instance
- Changed the relationships between communities and persons
- More metadata information for departments (opening hours, telephone, ...)
- Performance changes
 - Currently no dynamic portal for classes/class instances

Modifications of OpenACS components

■ Forums

- ☐ Users can see which messages they have not read yet
- ☐ Reading info saved on the message level

■ Portal

- ☐ Cached structure of openacs portals in XOTcl objects

■ Site-wide Search

- ☐ Allow indexing of MS-Word and Adobe PDF-Files
- ☐ Separate search options for
 - Organizational information (e.g. syllabus),
 - Learning resources, or
 - Forums
- ☐ Added Search tips

Site-wide search

Client side processing of exercises

Unit 1 Grammar Task 1: Present continuous vs. present simple 1

In the following excerpt from the text "Hard Labour" in the reading section, select the most appropriate form of the verb for each gap. The first three are done for you.

Aufgabe 1

100.00 Punkte

1. Thousands of students all hours to hold down a term-time job - but rather than helping their studies, asks Helen Carter.

3am: her flatmates home from their night out but Karen Graham out of bed to go to work. Graham, a third-year English and politics student at Manchester University, like thousands of students across the country, has been forced to take a part-time job to fund her studies and clear debts. Some of her shifts at Manchester Airport at 5am. "I from 5am to 2pm or from 10am to 7pm," she .

"When I the early shift I have to get a bus and often harassed by drunk people. I've worked out that each shift me 12 hours because travelling time 3 hours." Graham, 21, of quitting the job as the combination of her final year's studies and the long hours too much to cope with. "The last thing I to do when I work is open a book and start studying."

Integration with University Legacy-Systems

- Authenticate and auto-register university users
- Class Instance support
 - Get basic information (title) via XML-RPC
 - Replicate calendar items (date and room of lectures) via XML-RPC
 - Replicate class instance members via XML-RPC
 - Students enrol courses via legacy system, checks pre-requirements
 - Enrolment data is automatically synchronized with Learn@WU
 - Users not yet registered with OpenACS are auto-registered
 - Class instance data (members, dates, title) is kept in synch by ongoing background replication

Current Development

■ Implementation Work

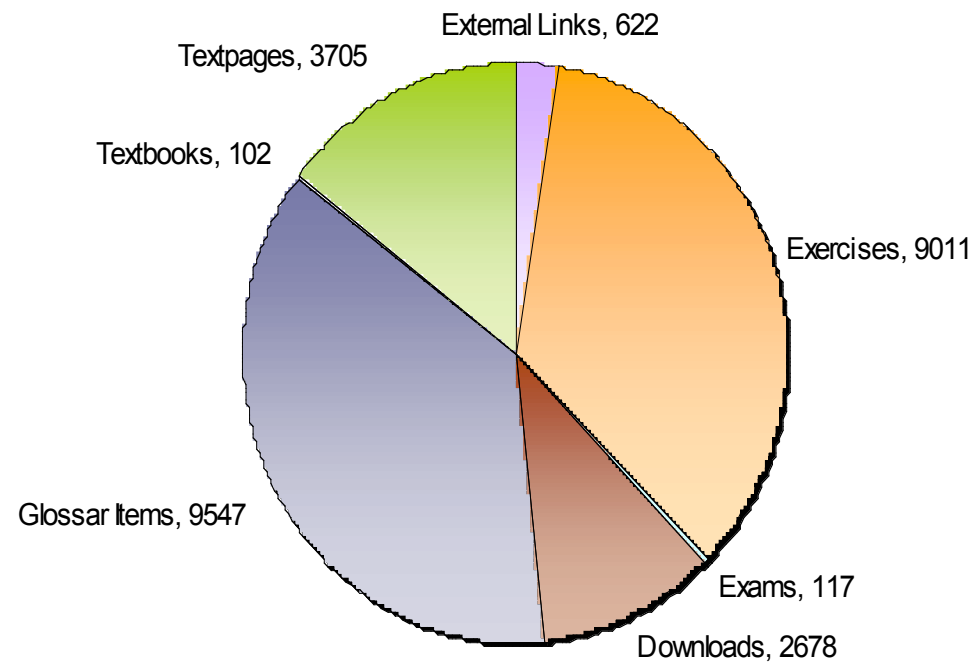

- ☐ Send SMS from Learn@WU
 - Via central university infrastructure
 - Can be used by the notification service
- ☐ Copy/Clone/Delete communities
- ☐ Import/Export communities
- ☐ Integrate Gradebook module with the exam server
- ☐ Good Chat/Instant Messaging solution still missing
- ☐ University-wide Intranet
- ☐ Community System for Alumnis (questionnaire in development)
- ☐ Need better integration with universities legacy system

■ Researchy issues

- ☐ Work on auto-grading of free-text exercises based on LSA

■ Incentive models for learning resource providers (teachers)

Current system status – learning resources
